

VOTEC Election Management And Compliance System (VEMACS)

VEMACS is complete election administration automation software from the most reliable company in the elections industry. VOTEC Corporation is staffed by former election officials from across the country and has been providing election software and hardware for over 20 years. VEMACS is an Oracle database that provides election professionals with the best system to register and track voters, compile NVRA statistics, coordinate and pay poll workers, conduct early and absentee voting, and verify candidates and petitions. VEMACS is installed in large and medium-sized jurisdictions totaling over 7.5 million voters in 11 states.

VEMACS Features:

Voter Registration

- Automatically precincts voter from residence address
- Maintains full registration and voting history
- Provides full NVRA tracking and reporting
- Generates public voter file on disc, CD, or email
- Automatically generates all notices including ID cards
- Queues notices for printing at scheduled times
- Bar-coded processing of returned notices
- One button access to districts and elected officials

Mapping / Streets / Districts

- Maintains street segment file with street range, precinct, precinct split, postal city, and zip code
- GIS interface easily accepts centerline files
- Blocks registration at commercial and mail drop addresses
- Precincts by unit or building number

Reprecincting / Redistricting

- Tracks all changes made to street ranges and precincts
- Auto updates voters with new precincts and districts

Candidate and Question Filing

- Produces list of offices up for election
- Records candidate filing and generates qualifications
- Converts data for ballot layout and counting system

Election Initiation

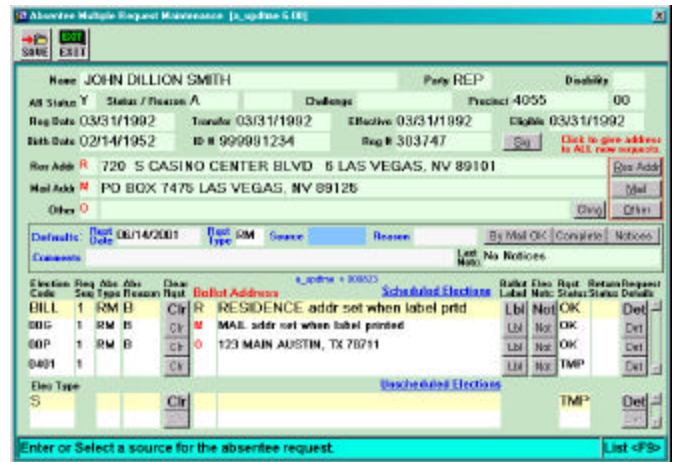

- Manages precinct and polling place consolidation
- Creates poll book of eligible voters by birth date, eligibility and residence
- Automatically initiates election layout based upon office and district schedule
- Prints poll books on any printer with a Windows driver
- Maintains an unlimited number of past elections and voting history
- Produces ballot styles and ballot order for absentee module and ballot printing
- Integrates candidate and precinct and district information with tabulation systems

VEMACS

Absentee and Early Voting

- Automatic preparation of absentee materials
- Identifies early absentees - overseas, military, disabled
- Allows signature comparison to digitized signature
- Manages in-office or remote voting with web interface
- Prepares labels or magnetic media for mailing company
- Real time update of early voters
- Bar-coded processing of balloting materials
- Generates and tracks notices to applicants

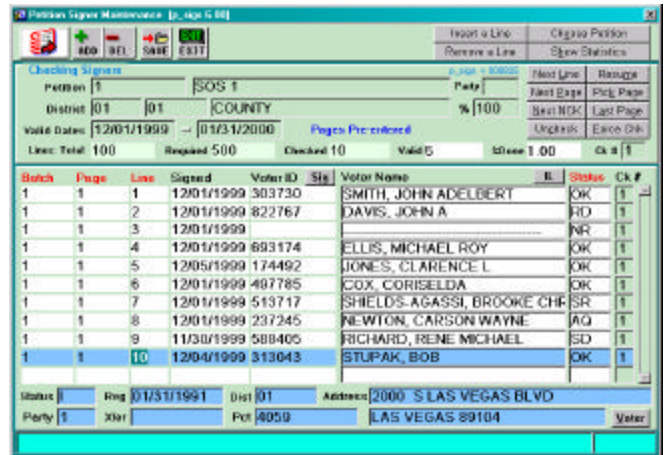

Petition Tracking

- Checks validity of date, signature, and residency
- Creates rule sets based upon district or issue
- Produces random sampling
- Allows increase in sample without recheck
- Tracks processing by user, rejection type, and date
